1988

## THE EARLY DAYS

Stefan Pütz first started in 1988 as a ONE MAN SHOW. With his planning office he specialized first in automation software for production plants and their commissioning.

Ten years after the company was founded no longer just switchboards were built, but also complete systems including mechanical equipment and robotics.

2007

## THE TAKE OVERS

The joy of new ideas and striving for high quality has become a driving force to take over and to continue successive different mechanical engineering companies. With their specific technology and industry knowledge this has enabled the range of services to be constantly expanded.

2024

## THE TEAMPLAYER

**PÜTZ GROUP now has 10 machine and plant engineering companies.**

**There is a subsidiary in Slovakia.**

On site, every company develops its products independently. Purchasing, human resources, marketing and controlling are centrally controlled. Today, the PÜTZ GROUP is characterized by the seamless interaction of the individual companies. By the resulting synergy effects the customers can be offered holistic and high-quality solutions – also in the specialty of the individual companies.

Now we are facing the fourth industrial revolution. The customers expect increasing flexibility, shorter processing times and reproducible product quality. Industry 4.0 and its own quality demand drive the PÜTZ GROUP, constantly to redefine and to further expand existing capacities.
