ENDURO V 500

Efficient endfinishing machines for high-volume production and demanding workpieces

The machines and systems of the **ENDURO V 500** series combine a consistently modular design with a high degree of flexibility in endfinishing. The vertical bed with processing units and clamping fixtures ensures unobstructed chip removal directly onto the chip conveyor located underneath.

Dimensions:

Workpiece diameter: 10–400 mm

Workpiece length: 80–12,000 mm

For processing:

Hydraulic cylinder tubes, Transmission shafts, Camshafts, Toothed racks, Crankshafts, and much more ...

Processing on both sides possible!

As standard, up to 3 tool spindles are implemented per side.

Your benefits at a glance:

- + Optional choice between **manual and automated loading**
- + **Clean working area** – guideways and linear rails remain free of chips
- + **Processing operations**, such as milling, drilling, centring and thread cutting, are carried out on both sides, in one work cycle and without manual intervention
- + **Modular structure**, extensions and special requests are possible at any time

Our new ticket system for support requests

Our new ticket system for support requests is now available – especially for urgent matters such as machine downtime or technical malfunctions.

Your request will be recorded in a structured format and forwarded directly to the appropriate specialist team. This allows us to process requests more quickly, ensure transparent workflows, and reduce response times.
